PROFESSIONAL PROFILE

- Strong statistics and data science foundation with hands-on experience in finance and quantitative analysis.
- Experienced working in collaborative environments while leading and contributing to data-intensive projects.
- Seeking roles that integrate mathematics with finance to develop, analyze, and refine robust models for market behavior, risk, and portfolio decision-making.

EDUCATION

Stony Brook University

MS in Applied Mathematics and Statistics

Stony Brook, NY

August 2025 – December 2026

- Relevant Coursework: Financial Mathematics, Portfolio Theory, Asset Valuation, Risk Management, Time Series Analysis, Machine Learning in Finance, Stochastic Calculus, Computational Finance

Hamilton College

BA in Mathematics and Computer Science

Clinton, NY

August 2021 – May 2025

- Relevant Coursework: Statistical Modeling, Probability, Programming, Statistical Machine Learning, Data Science
- Leadership: Hamilton Football Captain (2023-2024), Psi Upsilon Fraternity President (2023-2024)

EXPERIENCE

Fourier Fund

Quantitative Analyst

Stony Brook, NY

September 2025 – Present

- Provide portfolio analysis for Stony Brook University's student-run investment fund, focused on maximizing risk-adjusted returns in a long equity portfolio.
- Construct a multi-factor risk model to analyze portfolio exposures and quantify factor contributions.
- Build a Python-based backtesting and performance monitoring system that produces portfolio visuals and risk metrics to enhance the team's ability to assess risk-adjusted returns.

DataAnnotation

AI Expert Trainer (Part-time Contractor)

Remote

May 2025 – Present

- Generate coding prompts for Large Language Models (LLMs) coupled with complex codebases for testing model correctness, instruction execution, and efficiency.
- Produce coding prompt solutions and corresponding evaluation reports for LLM training.

Oppenheimer & Co. Inc.

Information Technology Intern

New York, NY

June 2024 – August 2024

- Developed and optimized backend endpoints for the financial advisor platform, enhancing system performance and user experience.
- Implemented unit tests to ensure the reliability and functionality of new and existing code.
- Wrote SQL queries to retrieve and analyze data from company databases, supporting backend development and ensuring data accuracy.
- Led winning intern team on an equity research project, analyzing market data to develop a diversified portfolio that we presented to a board of managing directors.

Predictive Success Corporation

Client Success Intern

Whitby, Ontario

May 2022 – August 2022

- Established a client sales performance map in Excel through assessment data analysis to evaluate a sales department based on proprietary Predictive Success metrics.

RECENT PROJECTS

Trading Engine Simulator

- Performed backtesting including visuals and significant performance metrics with comparisons to market benchmarks.
- Implemented a machine learning driven risk manager to lower drawdowns by assessing regime changes.
- Integrated with Alpaca API for historical asset data to simulate trades with bid-ask spread and slippage.

LSTM-MLP Option Pricer

- Built a neural network with PyTorch to improve option value forecasting by integrating sequential and dense layers.
- Preprocessed option data using Python (pandas) to streamline workflow for static and encoded features.

SKILLS

Technical Skills: Statistical Modeling, Risk Management, Data Analysis, Portfolio Construction, Machine Learning

Programming Skills: Python, R, C++, SQL, PySpark, Ruby

Software Tools: Git, Excel, Jupyter Notebook, Databricks, MongoDB, L^AT_EX
