Seeking opportunities to combine rigorous financial analysis, quantitative research, and market insight to identify attractive investment opportunities and support data-driven investment decisions.

EDUCATION

Stony Brook University <i>MS in Applied Mathematics and Statistics</i>	<i>Stony Brook, NY</i> August 2025 – December 2026
Hamilton College <i>BA in Mathematics and Computer Science</i>	<i>Clinton, NY</i> August 2021 – May 2025
• Leadership: Hamilton Football Captain (2023-2024), Psi Upsilon Fraternity President (2023-2024)	

EXPERIENCE

First Citizens Bank <i>Quantitative Analyst Intern</i>	<i>Morristown, NJ</i> May 2026 – July 2026
- Developed an interactive Power BI dashboard to analyze deposit portfolio trends, delivering automated visualizations and key performance metrics that supported quantitative modeling and business decision-making. - Wrote complex SQL queries to extract and transform enterprise data into reliable datasets for exploratory analysis. - Conducted analysis in Python to investigate deposit behavior, validate trends, and generate insights. - Collaborated with modeling and business stakeholders to translate analytical requirements into actionable dashboards, including a final project presentation to division leadership.	

Fourier Fund <i>Quantitative Analyst</i>	<i>Stony Brook, NY</i> September 2025 – Present
- Provided portfolio analysis for Stony Brook University’s student-run investment fund, focused on maximizing risk-adjusted returns in a long equity portfolio. - Constructed a multi-factor risk model to analyze portfolio exposures and quantify factor contributions. - Built a Python-based backtesting and performance monitoring system that produces portfolio visuals and risk metrics to enhance the team’s ability to assess risk-adjusted returns.	

DataAnnotation <i>AI Expert Trainer (Part-time Contractor)</i>	<i>Remote</i> May 2025 – Present
- Generated coding prompts for Large Language Models (LLMs) coupled with complex codebases for testing model correctness, instruction execution, and efficiency. - Produced coding prompt solutions and corresponding evaluation reports for LLM training.	

Oppenheimer & Co. Inc. <i>Information Technology Intern</i>	<i>New York, NY</i> June 2024 – August 2024
- Developed and optimized backend endpoints for the financial advisor platform, enhancing system performance. - Implemented unit tests to ensure the reliability and functionality of new and existing code. - Wrote SQL queries to retrieve and analyze data from company databases, supporting backend development and ensuring data accuracy. - Led winning intern team on an equity research project, analyzing market data to develop a diversified portfolio that we presented to a board of managing directors.	

RECENT PROJECTS

Fundamental Factor Investing: Conditional Autoencoder Portfolio
- Developed a machine learning pipeline using CRSP/Compustat fundamental data to learn latent factor representations for ranking stocks in long-short equity portfolios. - Implemented multiple conditional autoencoder architectures in PyTorch, including uncertainty-aware and information coefficient optimization models, to predict cross-sectional return rankings. - Engineered a rolling-window backtesting framework with point-in-time preprocessing, cross-sectional normalization, and annual retraining to eliminate look-ahead bias and data leakage.

Trading Engine Simulator
- Performed custom backtesting with visuals, significant performance metrics, and realistic trade simulation. - Implemented a machine learning driven risk manager to lower drawdowns by assessing regime changes.

SKILLS

Technical Skills: Statistical Modeling, Risk Management, Data Analysis, Portfolio Construction, Machine Learning
Programming Skills: Python, R, C++, SQL
Software Tools: Git, Excel, PowerBI, Jupyter Notebook, MongoDB, L^AT_EX
